## 1. Introduction

### 1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

## 1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze ASC/AMIS's interpretation and use of the CALS standards in transferring technical Raster data. ASC/AMIS used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

## 2. Test Parameters

**Test Plan:** AFCTB 93-105

**Date of Evaluation:** 24 November 1993

**Evaluator:**  
George Elwood  
Air Force CALS Test Bed  
Det 2 HQ ESC/AV-2P  
4027 Colonel Glenn Hwy  
Suite 300  
Dayton OH 45431-1672

**Data Originator:**  
HQ ASC/AMIS  
Diane Sondergelt  
Wright-Patterson AFB, OH 45433

**Data Description:**  
Technical Manual Test  
3 Document Declaration files  
3 Raster file

**Data Source System:**  
1840  
**HARDWARE**  
Unknown  
**SOFTWARE**  
Intergraph XXXX

Raster  
**HARDWARE**  
Unknown  
**SOFTWARE**  
Unknown

**Evaluation Tools Used:**

**MIL-STD-1840A (TAPE)**  
SUN 3/280

AFCTN Tapetool v1.2.10 UNIX

**MIL-R-28002 (Raster)**

SUN SparcStation 2

Carberry CADLeaf Plus v3.1

AFCTN validg4

AFCTN calstb.475

AFCTN xrastb.sun4

IGES Data Analysis (IDA) IGESView v3.0

Island Graphics IslandPaint v3.0

SGI Indigo2

AFCTN xrastb.sgi

PC 486/50

AFCTN validg4

IDA IGESView Windows

Inset Systems HiJaak v2.1

Inset Systems HiJaak Window v1.0

Expert Graphics RxHighlight v1.0

Corel Ventura Publisher

**Standards  
Tested:**

MIL-STD-1840A

MIL-R-28002A

### 3. 1840A Analysis

#### 3.1 External Packaging

The tape was hand delivered to the Air Force CALS Test Bed (AFCTB), and was not enclosed in a box in accordance with ASTM D 3951 requirements.

Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1.

#### 3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

##### 3.2.1 Tape Formats

The tape was run through the AFCTN Tapetool v1.2.10 utility. No errors and four notes were encountered while evaluating the contents of the tape labels. All of the errors are shown in Appendix A, Section Two, of the Tape Import Log included in this report.

A note was reported on the tape label version. MIL-STD-1840A permits the use of both version three and four. The use of the most current standard should be used and noted.

All three Document Declaration files were reported as having a short block. The end of the block was not padded out. This may cause some tape systems to be unable to read the data. No errors were noted in any of the files.

\*\*\* NOTE - Last block was incomplete. Short blocks are prone to be interpreted as noise by some tape drives.  
Tape Label => 2048, Actual => 392, Block Number => 1

The physical structure of the tape meets the CALS MIL-STD-1840A requirements.

### **3.2.2 Declaration and Header Fields**

No errors were reported in the Document Declaration file or data file headers. This portion of the tape meets the CALS requirements as defined in MIL-STD-1840A.

## **4. IGES Analysis**

The tape contained no Initial Graphics Exchange Specification (IGES) files.

## **5. SGML Analysis**

The tape contained no Standard Generalized Markup Language (SGML) files.

## **6. Raster Analysis**

The tape contained three Raster files. All files were evaluated using the AFCTN *validg4* utility. This program reported that all three files meet the CALS MIL-R-28002A specification.

The files were read into the AFCTN *xrastb.sun4* viewing utility. No problems were noted.

The AFCTB has several tools for viewing Raster files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

---

The files were converted using another utility available within the AFCTB, without a reported error. The resulting files were read into Island Graphics' *IslandPaint* and displayed.

The Raster files were read into Carberry's *CADLeaf* software, and displayed, without a reported error.

The files were read into IDA's *IGESView* and *IGESView for Windows* without a reported error. Both the UNIX and PC versions permitted the printing of the files.

The files were read into Inset Systems' *HiJaak for Windows* without a reported error.

The Raster files were converted using Rosetta Technologies' *Prepare* without a reported error. The resulting files were read into Rosetta Technologies' *Preview* and displayed.

The Raster files were read into Expert Graphics' *RxHighlight v1.0* and displayed without a reported error.

The Raster files on this tape meet the CALS specification as defined in MIL-R-28002A.

## 7. CGM Analysis

The tape contained no Computer Graphics Metafile (CGM) files.

## **8. Conclusions and Recommendations**

The physical structure of the tape from ASC/AMIS was correct. No errors were reported in the CALS Document Declaration file or data file headers. This portion of the tape meets the CALS requirements as defined in MIL-STD-1840A.

The Raster files meet the the CALS MIL-R-28002A specification.

The tape submitted by the ASC/AMIS meets the CALS MIL-STD-1840A requirements.
